Experience

Horizon Broadband

May 2024 – Present

Software Engineer - Full Time

Bengaluru

Real-Time User Analytics System for OTT Platforms

- Designed and developed a robust real-time user analytics system for OTT platforms, leveraging **AWS Kinesis Firehose**, **AWS Lambda**, and **Redis** to capture and analyze user interactions, device usage, and subscription trends.
- Optimized Data Aggregation: Utilized **Redis HyperLogLog** to efficiently count cardinalities with minimal error rates, reducing storage requirements to a maximum of 12KB per entry, ensuring scalability and cost-efficiency.
- Efficient Data Storage & Querying: Implemented **Redis Sorted Sets** as a permanent storage solution, allowing aggregated data to be stored with timestamps and enabling efficient range queries for real-time analytics.
- Front-End Dashboard: Developed a front-end dashboard in **React**, using **React Apex Charts** to provide intuitive visualizations of key metrics, including device usage, user demographics, and subscription trends for better data-driven decision-making.

CMS SDK Development for OTT Platforms

- Developed and implemented a CMS SDK in JavaScript, served via CDN, to standardize interactions with various CMS providers across OTT platforms
- Created a bridge adapter with multiple plugins for different CMS providers, allowing each plugin to be dynamically linked to the core SDK module, ensuring seamless integration and standardization of CMS data.
- Designed with Object-Oriented Programming (OOP) principles, implementing encapsulation, inheritance, polymorphism, and abstraction for reusable, maintainable, and extensible code.

Rugua

May 2023 – May 2024

Software Engineer - FullTime

Bengaluru

Automated Build Analytics and Testbed Management Dashboard

- Designed and developed an admin dashboard to streamline build and test management for DevOps teams, providing detailed analytics on Jenkins pipeline test cases. The dashboard displays the number of passed/failed builds, individual test case details, and related descriptions, eliminating manual monitoring.
- Implemented testbed management features, allowing users to book, release, and schedule testbeds for running test cases. Enabled real-time execution and tracking of test cases through an intuitive interface.

Pet Service Management Platform with E-Commerce Integration

- Developed a multi-tenancy platform allowing pet service providers to create personalized websites for managing their offerings such as grooming, walking, and scheduling services. Enabled service management features for tracking employees, assigning tasks, and observing progress through a dedicated admin dashboard.
- Integrated e-commerce functionality for the parent company to sell pet-related products such as food and groceries. Implemented commission-based service tracking for tenants to reflect earnings from booked services seamlessly.

Ascensio

Mar 2022 – May 2023

Web Developer - Intern

Remote

Chatbot Application

- Developed a chatbot application that automates user interactions and collects data after each conversation. Integrated **Airtable SDK** to store conversation data in **Airtable**, ensuring seamless data storage and retrieval.
- Implemented a scheduling system using **Celery** and **Celery Beat** to automatically end conversations after 24 hours, ensuring timely data collection and efficient resource management.

Web3 Tokens Swap Platform

- Developed a full-stack Web3 token swap platform, enabling seamless cross-chain swapping between Wagmi, Tron, and Solana wallets. Integrated real-time blockchain APIs to enable secure token transfers and updates.
- Optimized platform performance by implementing **SQLite3** for caching and utilizing **Next.js** server actions for efficient server-side logic, ensuring scalability and low latency.
- [Click here to view the project](#)

3D Printing Service Page

- Developed a 3D printing service page, enabling users to upload STL, OBJ, and other 3D model files for custom printing.
- Integrated **Firebase** for secure file storage and communication, facilitating user interaction for design customization and service arrangements.

Technical Skills

Languages: Python, NodeJS, C, C++, HTML/CSS, JavaScript, Typescript, SQL

Libraries/Frameworks: React, Django, Express, Nextjs, Redux-Toolkit, Redux-saga, React-Router, Tailwind, Bootstrap, Api, JWT, Django-rest-framework

Developer Tools : Docker, Git , Firebase , Aws, Babel, Npm, Webpack

Personal Projects

E-learning Platform | *JavaScript, React, Vite, Framer-motion, Tailwind, Firebase*

Mar 2023

- Led the development of an e-learning platform facilitating seamless course discovery, enrollment, and engagement for users. Implemented features such as user authentication via email, OAuth, and social media, allowing enrollment in courses, purchase of premium plans, scheduling of appointments, and event registration. Utilized Firebase Firestore for dynamic content management, ensuring real-time updates and efficient delivery of educational material.
- Leveraged React and harnessed Vite's advanced development features like Hot module replacement. Employed Tailwind CSS for Mobile-first driven UI, including dynamic theming for light and dark modes. Integrated Firebase services for authentication (OAuth, email login), database management with Firestore, file storage, and email functionalities.
- Utilized Framer Motion to create fluid animations and transitions, enhancing user interaction with intuitive navigation and interactive elements.
- [Click here to view the project](#)

Vans Rental Application | *JavaScript, React, React-Router, Firebase, Tailwind*

Jan 2023

- Built a user-friendly Vans Rental App that allows users to browse and rent vans by creating an account. Designed efficient client-side routing using React Router 6, incorporating error handling and loading indicators for a seamless user experience.
- Leveraged parallel data loading through React Router's data APIs to optimize performance and minimize delays. Integrated Firebase for secure user authentication and real-time database management.
